

Turn Your Parts Program into an Opportunity for Continuous Improvement

Failed parts have stories to tell. With the right approach—and the right people—on your team, those stories can have a positive, measurable and lasting impact on your machine performance.

DRIVE™ is ATS' multi-faceted Maintenance, Repair and Operations (MRO) Asset Management Solution designed to drive efficiency, increase machine life, reduced downtime, improved manpower utilization, and increased production insights. Comprised of four interconnected programs, DRIVE™ is a powerful way to drive MRO to a new level of value.

DRIVE™ Repairable Parts Management (RPM), one of the four DRIVE™ programs, is a data-driven effort aimed at continually improving the reliability of every component—and in turn, the machines they go into. From root cause analysis of failed parts by DRIVE™ RPM engineers, to part rebuilds, emergency repairs, intensive warranty tracking and more, DRIVE™ Repairable Parts Management solves problems, reduces repetitive failures, and keeps equipment running.

DRIVE™ RPM has been shown to reduce total repairable parts expenditures by up to 50%. Let ATS show you how to extend the life and productivity of all your equipment—old and new—through DRIVE™ Repairable Parts Management.

RELIABILITY IS OUR FOCUS

Available in combination with other DRIVE™ programs or as a standalone option, DRIVE™ Repairable Parts Management provides end-to-end performance benefits. Each element of DRIVE™ RPM is designed to increase the reliability of your critical manufacturing equipment:

- ➔ **Strategic Parts Management:** Complete data collection and analysis of all repairs, parts status, warranties and history
- ➔ **Comprehensive Monthly Reporting:** Provides effective management and oversight of program performance
- ➔ **Root Cause Focus on Repetitive Failures:** Ends costly replacement and repair due to unique factors (machine environment, training issues, insufficient specs, etc.)
- ➔ **Competitive Repair Pricing:** Price/performance analysis ensures most cost-efficient solution for parts repair and/or replacement
- ➔ **Detailed Warranty Tracking:** Warranties for every purchased part, component and assembly, tracked and claimed where appropriate
