

Uncover the Productivity and Profit Hidden in Your Parts Storeroom

In many factories, the parts crib is an afterthought. But with DRIVE™ from Advanced Technology Services, it's a place where savings, reliability and improved performance can be found—enough to impact your entire manufacturing operation.

DRIVE™ is ATS' multi-faceted Maintenance, Repair and Operations (MRO) Asset Management Solution. It is designed to drive efficiency, expanded machine life, reduce downtime due to lack of parts, improve manpower utilization, and increase business insights through comprehensive metrics. Comprised of four interconnected programs, DRIVE™ is a powerful way to drive MRO to a new level of value.

DRIVE™ Storeroom Management, one of the four components to our comprehensive DRIVE™ program, updates your onsite efforts in support of your overall MRO Supply Chain strategy. Organization and security are key elements—but the benefits don't stop there. Inventory location and storeroom staffing ensures that your operating personnel serviced properly, with efficiency as the overall goal of storeroom activities. ATS' systems and processes eliminate wasted effort and maximize your MRO team's efforts to reduce equipment downtime and enhance plant productivity.

When the right part is in the right place, at the right time, factories run better—and that's the aim of DRIVE™ Storeroom Management.

COMPREHENSIVE AND STRATEGIC

Available in combination with other DRIVE™ programs or as a standalone option, DRIVE™ Storeroom Management is comprised of a series of comprehensive, strategic material management disciplines designed to deliver quantifiable results:

- ➔ **5S Services:** Sort, Straighten, Shine, Standardize and Sustain—five steps that transform MRO crib performance
- ➔ **Standardized Part Naming Conventions:** Intelligent and intuitive identification conventions that assures correct ordering and utilization
- ➔ **Detailed Warranty Tracking:** Warranties for every purchased part, component and assembly, tracked and claimed where appropriate
