MOTOR REPAIR & MANAGEMENT

Trust the experts who have been keeping factories running since 1985.

When your motors are running, so is your factory. For more than 30 years, ATS has been performing onsite and offsite repair and maintenance on AC, DC and servo motors in dozens of industries. Our expertise spans virtually every make and class. Additionally, our services extend to parts and onsite depot management, ensuring you have the critical replacement parts you need, at the time they're needed, to ensure maximum uptime.

And now you can depend on ATS for new motor sales as well. Our direct relationships with a number of top motor OEM brands means we're a one-stop

resource for maintenance, repair, and sales. But because we're brand agnostic, you can rely on us to recommend the best possible product for your unique needs.

Critical motors are too important for run-to-fail or as-needed maintenance programs. Let ATS, a global leader in factory maintenance and parts management, design a solution that meets your production, energy efficiency and financial requirements. No one keeps motors turning as reliable as we do.

The Industry's Leading End-to-End Solution

AC, DC and servo motor repair and management, part of our larger Repairable Parts Management program, is an ATS specialty. Our experience and best practices have been formed across numerous industries, from heavy equipment and automotive to food/beverage and consumer packaged goods. The full range of ATS motor services includes:

Onsite Service: Routine, preventative, and predictive maintenance capabilities. Also, lubrication and engineering assessment of AC, DC and servo motor conditions/applications.

Offsite/Depot Repair: Repair and/or replace all makes and models, including pickup and delivery. Root cause analysis is performed as needed on major part failures.

Sales: Our new/remanufactured sales program includes authorized direct relationships with the industry's leading motor OEMs.

Stock Management: Our broad experience in parts maintenance means ATS is qualified to manage your entire stocking program for production equipment parts—onsite and offsite.

Smart Technologies: The heart of our modern maintenance program includes CMMS analysis, scheduling, repair recordkeeping, and more.

Data Capture/Analytics: Our skilled maintenance technicians can deploy various types of IoT devices and provide remote monitoring to capture your data, analyze it and implement improvements to keep your factory running smoothly.

Warranty Services: ATS offers long-term peace of mind through some of the best OEM warranties in the industry. Our warranty tracking ensures you receive the support you're entitled to.

ATS specialists are ready to visit your facility and assess your motor maintenance needs. We can tailor a maintenance plan to fit your requirements, or recommend a complete motor management program to ensure that your full inventory of motors operates at maximum efficiency, and with minimal downtime.
