

Unplanned Downtime is a Thing of the Past

All-inclusive machine health monitoring system
that is simple to deploy, adopt and scale.

How It Works

Monitor

Sensors collect
machine data 24/7

Detect

Prescriptive alerts of
machine health issues

Act

Reliability engineers
provide courses of action

ROI

Customers receive
8x ROI on average

Where Technology Meets Reliability

- Dedicated reliability engineers and data analysts monitor machine health 24/7
- Professionally installed, wireless, service-free sensor technology
- Cloud-based, intuitive and interactive dashboards
- CMMS integration for predictive maintenance
- One low monthly cost

Replace Instinct with Insights

Simply put, we make factories run better and smarter. Leveraging more than three decades of hands-on maintenance and reliability experience with the latest sensor and machine health monitoring technologies, ATS delivers predictive analytics to eliminate unplanned downtime and reduce maintenance costs.

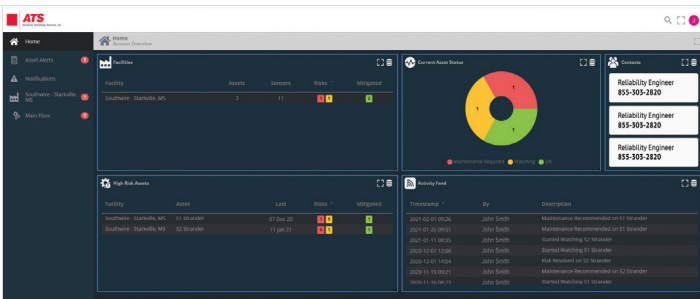

Wireless Sensors

Proprietary technology, ultra-low power electronic design means your sensors will last for years without needing to be replaced, and when they do, we provide at no cost to you.

Sensors monitor Tri-Axial Vibration and Temperature

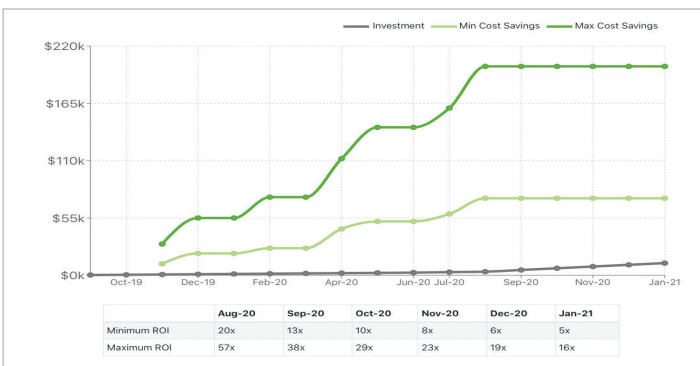

Cloud-Based Software

Collaborate with your dedicated Reliability Engineer utilizing the full suite of analysis tools and dashboards all within one platform for insights across your facility and enterprise.

24/7 Asset Alerts

Our prescriptive recommendations provide peace of mind knowing a trusted partner is monitoring your machines for increased OEE and reduced maintenance costs.

Real-Time ROI

See your return on investment in real-time with our dynamic software tool. On average, our customers realize an 8x ROI after implementing our machine health monitoring system.
