

INDUSTRIAL MAINTENANCE SOLUTIONS

## OPTIONS TO MEET YOUR PRODUCTION NEEDS.

With over three decades of experience in industrial maintenance, we've worked in hundreds of facilities across a variety of industries. Our commitment to flexibility, transparency and collaboration is foundational to our success, and we pride ourselves in a work philosophy built upon continuous improvement and thorough alignment to our customers' business goals. That's why when we engage with your maintenance process and operations, we don't just consider you our customer – you're our partner in production excellence.

**Comprehensive Maintenance Solution:** As a comprehensive maintenance partner, your business invests in a turnkey operation that takes full ownership of your maintenance process. From start-up and integration to key management systems and advanced maintenance technologies, we ensure that your maintenance operation is set on the path toward significant OEE.

**Technical Workforce Solution:** Manufacturing and reliable maintenance processes are your core competencies, but the recruitment, relocation and retention of technical workforce can be a hurdle to long-term success. Becoming a Technical Workforce Partner can refocus your efforts to delivery of productivity and profitability. ATS has a proven record of being able to attract, train and retrain talent, and our knowledge of the market means we can cultivate top talent for long-term delivery to your plant as an embedded solution.

**Surge Support Services:** Sometimes your factory maintenance just needs a little assistance with short-term projects or emergency situations. As a Surge Support Partner, you get high-value technical resources where and when you need them. With services across the manufacturing spectrum, our expert technicians supplement your team to relieve you of maintenance challenges that would otherwise slow down your operations – costing you time and money.

### PROVEN VALUE & EXPERTISE

- + Safety excellence
- + Smart technologies
- + A trusted brand
- + Flexibility of resources
- + Continuous improvement
- + Quality experience
- + Best-in-class processes
