

RELIABILITY 360

WHERE OPERATIONAL EFFICIENCY COMES FULL CIRCLE

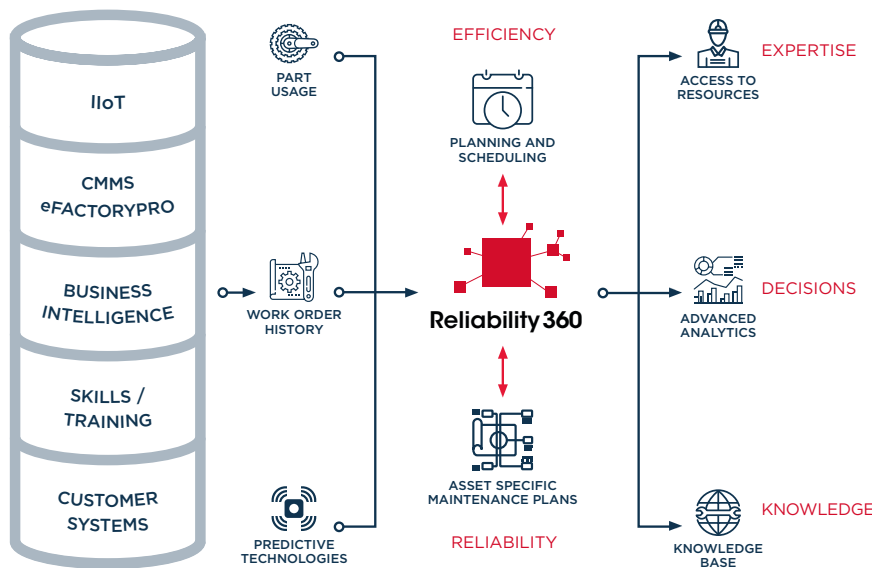

As the leader of industrial maintenance services, ATS is rooted in reliability. We know that the more you know about your equipment, the more you'll benefit from it. That's why we've built a state-of-the-art technology center that analyzes current and ongoing machine performance data and provides the answers you need to keep moving forward.

Reliability 360 is the solution to your most complex operational challenges. Collecting and analyzing data in one centralized location through Industrial IoT, R360 provides the key metrics and actionable insights necessary to reduce downtime, improve productivity and ensure on-time delivery.

SHIFT GEARS FROM REACTIVE TO PREDICTIVE

Manufacturers cannot afford to operate reactively. Using R360, you can optimize the lifespan and performance of your equipment with a predictive operating model. This best-in-class approach will help control maintenance spend, solve specific production challenges and streamline operational efficiency like never before.

RELIABILITY 360: IMPROVEMENT TO THE NTH DEGREE

- Machine Reliability
- Equipment Performance
- Productivity
- Profitability
- On-Time Delivery
- Controlled Maintenance Spend
- Equipment Downtime
- Labor Costs

FROM THE SENSOR TO OUR TECHNOLOGY CENTER

DATA

- Consistent
- Relevant
- Factual

INSIGHTS

- Analyzed
- Prioritized
- Decisions

RESULTS

- Efficient
- Predictable
- Performance

Minimally Invasive Sensors to Collect Data: Our small, custom-designed sensors collect crucial data without interfering with your operations. You'll know more about your equipment than ever before—without even knowing the sensors are there.

Holistic Data to Guide Key Internal Decisions: Reliability 360 provides an unparalleled service by proactively analyzing data across your enterprise. The ability to centralize data analysis and continuously monitor critical equipment gives decision makers the insight they need to resolve operational challenges and develop standardized processes for future improvements.

A Problem-Solving Platform for Manufacturers: Reliability 360 was built specifically for manufacturers to help solve their most pressing challenges. Using our proprietary support system, customers will benefit from lower operating costs, greater productivity and improved equipment availability.

Navigating the Roadmap of Centralized System Performance: Channeling information into one centralized location, R360 is a data hub that drives actionable results. Our program helps negate skills gaps in maintenance trades and reduces dependency on localized skillsets. Manufacturers will discover newfound clarity in their operations and better visibility into their maintenance costs, equipment performance and more.

Business Intelligence, Redefined: Reliability 360 is all about working smarter, not harder. Utilizing proprietary technology and data collection practices, we are able to give manufacturers a leading edge and maximum control over equipment performance

Leveraging 35 Years of Focused Maintenance Data: Our program is backed by decades of focused maintenance data and captures industry experience spanning thousands of years. Such a foundation results in highly accurate, data-driven support that will help you better meet the speed of your business.
