## PRODUCTION OPERATOR SERVICES

### Facing a shortage of operators for your critical machines?

Advanced Technology Services (ATS), the leader in factory maintenance services for over three decades, knows how to resolve your equipment challenges — including a lack of qualified and hard-to-find operators.

As a supplement to our industrial maintenance services, ATS has a reliable workforce that can both maintain and operate your equipment. As a one-stop resource, we can ensure that your critical machines will be online and producing — even your older and more maintenance-intensive assets.

In today's competitive hiring environment, it is difficult to find and keep machine operators you can count on. We strive to develop our teams and set them on a career path that supports the growth of your business. As a result, ATS operators are motivated to understand production and the importance of keeping factories running.

Contact us today and let us show you how we can handle aspects of manufacturing equipment to help you achieve your production goals.

## Your Productivity is Our Priority.

Our production operators are available as a supplement or enhancement to your existing industrial staff. The ATS team is committed to your specific machines and ready to step in when and where you need them.

**Focus on Critical Machines:** ATS can solve operator shortages for your critical production assets in high-tech and automated environments

**Faster Machine Service:** Having a hybrid of maintenance/operator personnel on the floor means less downtime and quicker resolution of equipment issues.

**Around-the-Clock Support:** Uptime and continuous operation is essential for high output. ATS can meet your needs for all shifts, even on a 24/7 basis.

**Focus on Professional Development:** We attract talent that is career-oriented, dedicated to their tasks and always willing to learn. By working to develop our operators, we retain a quality team aligned with your production needs while building and engaging expertise for the future.

### Major manufacturer logs 27% product increase with ATS

#### CASE STUDY

After struggling with months of uneven output, a major U.S. industrial manufacturer engaged ATS to handle all production aspects of an important product subassembly. ATS cross-trained its personnel to perform material handling, operation, quality control, logistics, and supervision, in addition to routine maintenance.

In the first five months, ATS increased average daily builds of the subassembly by 27%. By the manufacturer's own estimates, ATS operating/maintenance personnel were responsible for annualized productivity gains of nearly \$7.3 million.
