\mu Hands on Courses

Electrical/Electronic and Industrial Motor Drives

EL102-Wiring Simplified

Learn how to practice electrically safe work habits, use a multimeter, calculate circuit loads, select conductors, run wiring, and connect components to complete a circuit. Students also receive hands on practice of various conduit bending techniques.

Estimated class duration: 24 hours

EL103-Soldering Basics

An introductory course for maintenance technicians to successfully understand and safely use the tools, processes and applications involved with soldering through hands on lab exercises.

Estimated class duration: 16 hours

EL121-Electrical Controls & Components

A workshop designed for beginners, by learning fundamental concepts of electricity / ohms law, safety, multimeters, identifying and checking electrical components, circuits, components, schematics, ladder diagrams, motors and more.

Estimated class duration: 28 hours

EL122-Electrical Troubleshooting, Relay Logic

This course reviews electrical theory, component identification and operation, and multimeters. Using hands on trainers, students wire and test various relay control circuits, while learning relay logic to help prepare them to engage in PLC troubleshooting.

- · Interpretation of ladder logic symbols and diagrams
- · Understanding basic electrical troubleshooting theory
- Series and parallel circuit logic and diagnostics
- · Ladder logic creation and diagramming
- · Interpretation of electrical schematics and troubleshooting
- · Development of motor starter circuits
- · Creating ladder logic for relays, timers, and starters
- Safely troubleshoot live circuits (NFPA70E Arc-Flash)
- · Use a meter (DVOM) in electrical troubleshooting

Estimated class duration: 28 hours

EL132-Electrical Print Reading

An introduction to electrical theory and ohms law, basic electrical symbols are described and explained at a component level. Various types of electrical diagrams are introduced so their function can be analyzed by the class. Students can also supply diagrams from their plant for review.

Estimated class duration: 16 hours

Electrical/Electronic and Industrial Motor Drives

EL201-Industrial Electronics Maintenance

This course is designed to aid in the understanding and troubleshooting of electronic system components when board level diagnostics are required. The understanding gained within this course enables electrical technicians to troubleshoot electronic component failures at a more complex level, allowing for root cause failure analysis and prevention of repeat failure.

- · Efficiently and effectively identify which circuit board needs replaced or repaired
- · Troubleshoot solid-state circuits
- · Use oscilloscopes and multi-meters to trace signals
- · Understand resistors, capacitors, inductors, diodes, SCR's, TRIAC's, and other solid-state devices
- · Safely work with electronic equipment, protecting people and equipment

Estimated class duration: 28 hours

EL235-Advanced Electrical Troubleshooting

Hands-on training course for maintenance personnel required to perform advanced electrical maintenance on production and support equipment including various electrical circuits and programmable logic controllers. Techs will be involved with higher level electrical circuit troubleshooting and development, and NFPA70E safety.

- · Single phase to 3 phase power conversion
- · Wiring advanced electrical circuits
- · Advanced Troubleshooting circuit issues
- · SLC 500 PLC I/O board configuration

Estimated class duration: 28 hours

EL355-Troubleshooting & Repair of AB Flex 70/700 Drives

Hands-on Flex 70/700 drives maintenance and troubleshooting; including parameters, meter and oscilloscope measurements, Communications modules, HIM utilization, and drive terminal interfaces.

Estimated class duration: 28 hours

EL371-NFPA70E Electrical Safe Work Practices

A hands-on training focusing on how to utilize the standard and apply that knowledge. This class is available as a one-day refresher course, a two-day full content course or as an extension option for many of our hands-on classes.

- · Electrical safe work practices
- Recognizing electrical hazards
- · Emergency procedures
- OSHA requirements
- · NFPA70E code updates
- Arc Flash / Arc Blast Shock / Electrocution
- Proper PPE use and inspection
- Lockout energy controls (LECP) procedures
- Multimeter safety

Estimated class duration: 8 or 16 hours

* MEETS SAFETY REGULATIONS

PLC202-PLC 5, 500 & 5000 Platforms

This course covers the basic operations and troubleshooting of PLC's, utilizing Rockwell RSLinx/Logix PC software as the main interface point.

- · Basic Electricity
- Ladder Logic
- · Electrical Schematics
- · Motor Starter Circuits
- Creating Ladder Logic for Relays PC to PLC communications
- · Rockwell RSLinx Software Driver Selection
- · PC Com Port Selection
- PLC Fundamentals 1
- · Going Online with RSLinx/Logix
- RSLinx/Logix Software Navigation
- Program Upload and Download
- Program Search Options
- · PLC Tagging and Labeling
- · Troubleshooting PLC Faults
- · Troubleshooting with PLC Programs
- Troubleshooting I/O
- PLC Components & Operation
- Relay Ladder vs. PLC Ladder
- · PLC Scan Time and Method Variances
- · PLC5, SLC500, ControlLogix, CompactLogix, & MicroLogix Specifics

Estimated class duration: 28 hours

PLC300-PLC Troubleshooting & Repair

Siemens S7 PLC control system troubleshooting. The student will configure, assemble, write, edit, force I/Os, backup, restore and monitor ladder or STL logic to execute specific program functions using a student workstation.

Estimated class duration: 28 hours

■ PLC401-PanelView™ Modifications and Communications

This course is ideal for technicians tasked with replacing, reprogramming, and installing PanelView displays and using the Rockwell PanelBuilder software. Subjects include setup, screen modification, communications, ladder diagnostics and troubleshooting.

Estimated class duration: 28 hours

PLC481-ControlLogix & RSLogix 5000

Configure, assemble, and then write the necessary ladder logic to execute tasks with a ControlLogix 5000 controller.

Estimated class duration: 28 hours

RB220-Fanuc Robotics System R-J# Series Controller

Operation and maintenance on a FANUC System RJ, RJ-2, RJ-3 or RJ-3iB controller, utilizing the teach pendant as the main interface point. Tasks include familiarization in jogging the robot, recovering from common faults, basic programming, program execution, I/O manipulation, and back-up file management. Additionally, this course introduces common maintenance practices including periodic maintenance, preventative maintenance, and axis mastering.

Estimated class duration: 24 hours

CNC201-CNC Maintenance and Troubleshooting

Operation and maintenance for CNC Controlled equipment. This course uses FANUC 0iC and/or 16/18i, to teach navigation of the CNC control, system diagnostic features, basic operations, program interpretation, and troubleshooting of CNC components through feedback devices. Activities include familiarization in jogging the machine, recovering from common faults, MDI programming, program execution, I/O manipulation, troubleshooting with PMC logic, and servo system diagnostics.

Estimated class duration: 28 hours

Mechanical And Precision Maintenance

ME127-Troubleshooting Mechanical Power Systems

Identify problems, troubleshoot, and perform maintenance on drive systems including belts, chains, gear drives and recirculating ball screws. Drive system serviceability, measurement and maintenance are of paramount focus in this course.

Estimated class duration: 28 hours

ME170-Mechanical Print Reading

This class discusses the complexities of geometric dimensioning and tolerancing, various print views, projections, and functions of mechanical prints, while developing skills that allow technicians to interpret both, the prints of the equipment they are responsible for maintaining, as well as understanding the parts that are being manufactured.

- · Identify details, markings, and machine parts from an assembly drawing
- · Identify an object from an orthographic drawing
- · Identify elements located within the title block of a detail drawing
- · Identify screw threads from a number specification
- · Identify and interpret an assembly drawing

Estimated class duration: 16 hours

Mechanical And Precision Maintenance

ME202-Bearing Life Improvement

Improve equipment longevity by diagnosing the root cause of bearing failures and the preventative measures required to alleviate premature failures. Additionally, bearing and bearing seal types are identified and discussed to ensure that students understand the proper application, adjustment and tolerances associated with different bearing types.

- · Determine proper sizes of shafts and housings
- · Measure straight and tapered shafts
- Demonstrate proper bearing mounting and dismounting techniques
- · Properly lubricate rolling bearings
- · Monitor rolling bearings to prevent catastrophic failure

Estimated class duration: 24 hours

ME221-Industrial Gearbox Repair (Speed Reducers)

Troubleshooting, rebuilding, installing, and aligning of industrial gearboxes. Students will develop the skills and methodology to properly address gearbox issues of the worm, helical, herringbone, spur, and other types. Additionally, this course covers a selection of lubricants, their applications, and a breakdown on service rating.

- Troubleshoot failed gear boxes
- · Select the proper worm gear box
- · Properly install a speed reducer
- Select the ideal coupling for the gearbox by rating, speed, and misalignment factor
- · Correctly replace seals and bearings
- · Correctly set up a gear box using shims

Estimated class duration: 28 hours

ME227-Precision Maintenance Part 1

In-depth application and use of measuring devices including tapes, vernier calipers, dial calipers, digital calipers, inside micrometers, outside micrometers, depth micrometers, telescoping gauges, feeler gauges, dial indicators and height gages. Also included are fits and tolerances for bearings, housings, and shafts plus strengths and characteristics of common fasteners.

* This course is a pre-requisite to ME228 – Precision Maintenance Part 2.

Estimated class duration: 24 hours

ME228- Precision Maintenance Part 2

A continuation of ME227 – What is torque, including various applications in calculation, conversion and the many fasteners and components that can be impacted by torque. Proper selection and use of a wide variety of torque wrenches. Installation, alignment, and maintenance of many types of chains, sprockets, belts, and pullies. Motor installation, pulley alignment and coupling alignment procedures.

- · Understanding of torque
- · Use of Keys and Keyways
- · Master level understanding of the installation of chains, sprockets, belts, and pullets
- · Advanced understanding of pulley alignment, couplings, and shaft alignment including laser alignment

Estimated class duration: 24 hours

FP131-Liquid Process Pumps Troubleshooting

A workshop for millwrights, plumbers, pipefitters, mechanics, machinery maintenance mechanics, electromechanical technicians and more. Begins with an introduction to liquid process pumps and builds toward concepts like alignment and lubrication allowances.

- · Troubleshoot, diagnose and repair failed seals
- · Align pumps
- Read pump curves
- · Install piping and flanges correctly
- Properly install pumps
- Reduce fugitive emissions
- · Repack and adjust pump stuffing boxes
- Install standard shaft couplings

Estimated class duration: 28 hours

FP151-Fluid Power Print Reading

Standard symbology, conventional fluid and pneumatic diagrams, and logic diagrams are explained thoroughly.

- Demonstrate an understanding of symbology, including schematics and piping drawings.
- Understand typical fluid power diagrams
- · Interpret schematics including fluid power logic and piping drawings
- · Demonstrate understanding of various print attributes: plan view, detail, elevation, isometrics
- · Utilize fluid power schematics to identify function of fluid power systems

Estimated class duration: 16 hours

FP153-Fluid Power—Troubleshooting Hydraulics

A lab-based fluid power training course, read and interpret fluid power schematics to understand the component functions and common circuitry. This course provides a hands-on experience in the application of fluid power troubleshooting, inspection and replacement of hydraulic components, and preventative maintenance processes. Hands-on training with directional control valves, pressure controls valves, flow control valves, and actuators

- · Understand hydraulic safety best practices
- · Apply fluid power theory and Pascal's Law
- · Utilize component functionality to demonstrate intensifier functions
- Apply troubleshooting methods at a component level
- · Demonstrate function of accumulators
- · Understand function and rating of hydraulic fluids, seals, and filters

Estimated class duration: 28 hours

FP161-Troubleshooting Pneumatic Equipment/Controls

Focused on working safely with pneumatic systems and troubleshooting pneumatic logic systems.

- Read pneumatic schematics
- · Identify and understand pneumatic components
- · Troubleshoot pneumatic control circuits
- Read and interpret ladder diagrams
- Understand common circuit applications
- Perform preventive maintenance
- · Remove, clean, and replace pneumatic components

Estimated class duration: 28 hours

RL158-Safe Rigging, Lifting, & Moving of Equipment

Safe lifting and moving - utilization of components and practices "Below the Hook". This course covers proper use and inspection of lifting devices, hand signals, load balancing, jacks, rollers and dollies, and cribbing. Successful completion of this course and exam provides internal qualification in accordance with regulations set forth by OSHA 29CFR1910.184 and 29CRF1926.251.

Estimated class duration: 24 hours

* MEETS SAFETY REGULATIONS

RL161-Overhead Crane Inspection

Students will learn how to perform the OSHA/ANSE frequent and periodic inspections. A hands-on experience customized to fit the customers particular needs.

- · Understand crane terms and applicable ANSI standards
- OSHA 1903.1- General Duty Clause
- · OSHA 1910.6- Incorporation by Reference
- OSHA 1903.13- Imminent Danger
- OSHA 1910.179 Overhead and Gantry Cranes
- OSHA 1910.184 with 1926.251 Insert and Applicable Tables
- · Demonstrate proper Lockout/Tag Out
- Interpret the definition of crane operation, condition, and limitations
- · Identify risk and prevent overhead crane incidents
- · Know wire rope technology
- Interpret and Perform inspection procedures
- Adhere to ASME/ANSI B30.xx and CMAA specification 70 & 74

Estimated class duration: 24 hours

* MEETS SAFETY REGULATIONS

Factory Maintenance

FM226-Air Conditioning & Refrigeration Certification

Students earn an EPA Refrigerant Recovery Certification in this three-day course. Beginning with an overview of HVAC, students prepare to take the certification test by learning safety, electrical, troubleshooting and filtration concepts, to name a few.

- · Understand the physics of heat and heat transfer
- · Apply basic electrical theory and troubleshooting
- · Apply Print reading and Schematics Skills to HVAC
- · Safely work with refrigeration and air conditioning systems
- · Understand the methods of heating, filtration, and humidification

Estimated class duration: 28 hours
