## PRODUCTION OPERATOR SERVICES

### Facing a shortage of operators for your critical machines?

Advanced Technology Services (ATS), the leader in factory maintenance services since 1985, knows how to resolve your equipment challenges — including a lack of hard-to-find production and welder operators.

As a supplement to our industrial maintenance services, ATS has a reliable workforce that can both maintain and operate your equipment. As a one-stop resource, we can ensure that your critical machines will be online and producing — even your older and more maintenance-intensive assets.

In today's competitive hiring environment, it is difficult to find and keep machine operators you can count on. We strive to develop our teams and set them on a career path that supports the growth of your business. As a result, ATS operators are motivated to understand production and the importance of keeping factories running.

Contact us today and let us show you how we can handle aspects of manufacturing equipment to help you achieve your production goals.

## Your Productivity is Our Priority.

Our production and welder operators are available as a supplement or enhancement to your existing industrial staff. The ATS team is committed to your specific machines and ready to step in when and where you need them.

### Solve Labor Shortages

ATS can provide operators for critical production assets in any process and discrete manufacturing environment.

### Increase Production Output

Having production and welder operators on the floor means your factory stays up and running and schedules are met.

### Around-the-Clock Support

We know how important uptime is so our operators are available to support your 1st, 2nd or 3rd shift operations.

## Major manufacturer logs 27% product increase with ATS

### CASE STUDY

After struggling with months of uneven output, a major U.S. industrial manufacturer engaged ATS to handle all production aspects of an important product subassembly. ATS cross-trained its personnel to perform material handling, operation, quality control, logistics, and supervision, in addition to routine maintenance.

In the first five months, ATS increased average daily builds of the subassembly by 27%. By the manufacturer's own estimates, ATS operating/maintenance personnel were responsible for annualized productivity gains of nearly \$7.3 million.
