

SURPLUS MRO PARTS

TURN OBSOLETE OR EXCESS INVENTORY INTO OPPORTUNITY.

Managing spare parts inventory often results in excess, outdated or obsolete items that consume valuable space and resources. These parts don't need to remain idle. Through a structured and customer-focused approach, ATS helps manufacturers recover value, reduce waste and improve inventory visibility—without adding to their internal workload. Backed by decades of experience in MRO optimization, this solution simplifies surplus management, freeing teams to focus on core operations.

How It Works

1

ATS Professionals Identify Obsolete Inventory

During on-site support or MRO assessments, ATS captures a list of obsolete or excess parts from your storeroom. This can often be accomplished digitally.

2

Pricing is Determined

The inventory is evaluated to determine competitive market value, including freight and removal logistics.

3

Review the Offer

ATS provides a clear proposal for pricing, factoring in logistics and other active services.

4

Get Paid

Upon acceptance of the proposal, a payment is made directly to the customer via account credit or by check.

5

Inventory is Removed

ATS coordinates pickup—often within 30 days—to eliminate clutter and improve storeroom space.

Program Benefits

RECOVERED INVESTMENT

REDUCED HOLDING COSTS

STREAMLINED STOREROOMS

RECLAIMED STORAGE SPACE

REDUCED IDLE STOCK

Ideal Use Cases

FACILITY SHUTDOWNS

MRO TRANSITIONS

CAPITAL REALLOCATION

SUSTAINABILITY GOALS
